

URGENT FIELD SAFETY NOTICE

Subject: RapidArc™ and VVMAT Treatment may deliver as Dynamic Arc on Incorrectly Configured System

Commercial Name of Affected Product: Clinac 2100

FSCA Identifier: CP-02334

Date of Notification: 2010-07-20

Type of Action: Notification

Details on Affected Devices:

All C series Clinacs Equipped for Rapid Arc Treatment delivery
see Appendix for serial numbers

Description of Problem:

We are writing to advise you about a possible configuration issue on RapidArc and VVMAT systems, including information on how to identify that your system does not have this issue.

In the rest of this letter, 'VMAT' is used as a generic term to represent RapidArc or VVMAT treatments.

Anomaly:

A system was discovered where VMAT plans were delivered as Dynamic Arc. On investigation, it was determined that an older configuration of the Clinac and older version and configuration of the LVI software ('Linac VI' –the interface computer between the Clinac and the 4DITC), which did not recognize VMAT plans was inadvertently installed.

Under these circumstances, dynamic dose rate and gantry speed features as well as avoidance sectors (range of gantry rotation where no dose should be delivered) that may be part of a VMAT plan are not recognized, and dose delivered does not match the treatment plan.

We believe that this system configuration issue was unique, but are issuing this letter as a cautionary measure.

Recommended User Action:

- Users should observe the C-series display during delivery of a test VMAT plan. The words 'RapidArc X' or 'VMAT X' should appear under Treatment Type during dose delivery. If the words 'RapidArc' or 'VMAT' are not seen, call Varian service and discontinue use of the device for VMAT treatments. Note you can also determine the version of Linac VI software installed – refer to the 4DITC Administrative Reference Guide.
- It is also recommended that users establish routine machine QA checks for VMAT. The VMAT machine QA should be performed at least every time the software configuration of any component on the Clinac, i.e. 4DITC, Linac VI, C-series, MLC, is modified. For a discussion on VMAT machine QA, users are encouraged to refer to: *Ling et al., Commissioning and Quality Assurance of RapidArc™ Radiotherapy Delivery System, Int. J. Radiation Oncology Biol. Phys., Vol. 72, No. 2, pp. 575–581, 2008*

URGENT FIELD SAFETY NOTICE

RapidArc™ and VVMAT Treatment may deliver as Dynamic Arc on Incorrectly Configured System

- Users are encouraged to take advantage of the RapidArc Bibliography and Commissioning information available at www.MyVarian.com
- If you have a pre-treatment plan QA program for VMAT plans established in your clinic, please note the following:
 - Some treatment planning systems, like Eclipse, have a function that allows calculation of VMAT fields as if the dose was delivered from a single gantry angle, typically 0 degrees. This function is used to simulate measurement conditions where a radiation detector is attached to the machine's head and rotates with the gantry during VMAT delivery. If such a plan, stripped from the gantry rotation information, is delivered on the machine, it will be delivered as a static gantry IMRT plan. Caution should be used if this approach is selected for pre-treatment plan QA. The machine is not operating in VMAT mode when delivering such a plan. The QA method is thus not fully verifying the capabilities required to deliver VMAT plans.

Varian Actions:

- Varian is notifying all possibly affected customers with this document.
- Varian is modifying user documents, installation instructions, and the Customer Acceptance Test Plan in order to prevent a recurrence of this system configuration problem.

Please advise the appropriate personnel working in your radiotherapy department of the content of this letter.

We sincerely apologize for any inconvenience and thank you in advance for your cooperation. If you require further clarification, please feel free to contact your local Varian Customer Support District or Regional Manager.

URGENT FIELD SAFETY NOTICE

RapidArc™ and VVMAT Treatment may deliver as Dynamic Arc on Incorrectly Configured System

The undersigned confirms that this notice has been provided to the appropriate Regulatory Agency.

Michael Pignataro on behalf of Dave Hall 7/20/2010
